

Institutional Strengthening of the Greater Caribbean to address future sargassum influxes for/during the 2026-2030 period

Preservation and
Conservation of
the Caribbean Sea

The project seeks to strengthen regional cooperation in the Greater Caribbean Region to address the escalating sargassum crisis through coordinated science, policy, and management actions.

US \$25M

Implementation timeframe

60 months

Objectives

- To leverage the Regional Action Plan for coordinated response for the Greater Caribbean to the sargassum influx crisis.
- To establish a regional sargassum monitoring network.
- To promote knowledge transfer and technological advances in participating countries to advance the monitoring, containment, and valorisation of sargassum.

Expected results

- Improved access to regional data and early warning.
- Strengthened technical capacity in Member countries for monitoring, forecasting and management.
- Strengthened regional integration and science-policy collaboration.

Beneficiaries

- 25 Member States and 10 Associate Members
- Coastal communities
- Fisherfolk
- Tourism actors

Work with Us

All ACS projects and initiatives are generally required to go through the following processes for approval, promotion and implementation:

1

Development of Project Concept Documents

The ACS Secretariat prepares Project Concept Documents for the approval of the Membership.

2

Approval by the ACS Special Committee

There is a Special Committee assigned to each priority focal area of the ACS.

3

Promotion and resource mobilisation

The ACS Secretariat promotes the approved PCD to external partners.

4

Commitment for Cooperation

Once a key partner has committed to cooperate with ACS on an initiative.

5

Project Implementation

Once cooperation is mobilised for an ACS project, the Association implements and regularly monitors/evaluates the project.
